

# Why Amazon?

Before we get into everything, below is my take on why reselling on Amazon is worth it, and is hands down the easiest business to start. I worked in construction full time as a project manager doing about 50 hours a week. I started Amazon while working that job and it only took me 9 months to match my monthly salary from construction.

Most people think ecommerce is too saturated and it's not a real business model anymore. I thought the same thing. The opposite is true, and always will be. Online retail is continuously growing when you think about it.

**How many of your last purchases were online?** Where do you buy most of your favorite products, clothes, and everyday necessities? Online. And for most people, that usually means buying on Amazon.

## Amazon is the largest online retailer in history because:

1. They sell literally every product
2. It's easy and convenient
3. Shipping is fast, usually 1 to 2 days, often same day
4. Returns are simple and almost guaranteed for all orders
5. People are too lazy to look elsewhere. They trust Amazon for all their needs

People know they can get what they need with the click of a button, no matter the brand or product. I personally buy products directly from popular brands and then resell them on Amazon at a higher price. **I generated \$100,000 in my first year** because of this lazy effect from consumers. People would rather buy from Amazon because they want their order as fast as possible. They won't even think twice to search for the product online to get it cheaper. Keep that in mind the next time you order something yourself. That's what makes Online Arbitrage so powerful. You can buy a product, list it for sale the same day, and in some cases make your money back the very same day.

# The Odds Are in Your Favor

---

Currently there are about **300 million active customers** purchasing on Amazon and only about **9 million 3rd-party sellers** (like me). That's over **30 customers per seller**. The opportunity isn't theoretical. The buyers are already there.

All you have to do is show up. Learn the material here. Dedicate 1 to 3 hours a day and learn to find profitable products.

I'll admit, finding those winning products is hard work, but the reward is making money around the clock, and getting financial freedom. This is **not** a get-rich-quick scheme. It's a rinse-and-repeat process that can replace any 9 to 5 salary over time. Your actions determine how long that takes.

I tried ecommerce four different times over five years, starting with Shopify and TikTok Shop in college. All four brand ideas failed and I lost several thousand combined. When I found Amazon, everything made sense. I knew this was the right online retail model to pursue.

This guide will show you exactly what you need to get started, what to focus on first, and how to begin the right way as a beginner. I have paid over **\$12,000 in mentorships** to learn everything I know about selling on Amazon. The strategies here include what I learned from millionaire sellers and what I used to go from a \$1,000/month side hustle to a multi-six-figure Amazon business within two years.

If you bought this PDF and read this far, you know everything I just said is true and you now have all the information to know what to do.

---

The only thing missing is the decision to  
begin.

## Make it today.

# What Is Amazon FBA?

The 30,000-foot view - what this business actually is and why it works.

---

## Amazon Is a Marketplace, Not a Store

You're not building your own e-commerce website. You're listing products on the world's largest marketplace - one with **300+ million active customer accounts** and over \$600 billion in annual sales. Amazon already has the traffic, the trust, and the logistics infrastructure. You just need to put the right product in front of the right buyer at the right price.

Think of Amazon like a flea market with 300 million shoppers walking through every day. You just need to rent a table (your listing) and put something on it that people want to buy.

**300M+**

ACTIVE CUSTOMERS

**\$600B+**

ANNUAL SALES

**60%**

SALES FROM 3P SELLERS

## FBA = Fulfillment by Amazon

FBA stands for **Fulfillment by Amazon**. Here's how it works:

- ▶ You find a product that sells on Amazon for more than you can buy it for
- ▶ You purchase the product and ship it to Amazon's warehouse
- ▶ Amazon stores it, and when a customer orders, Amazon picks, packs, and ships it
- ▶ Amazon handles customer service and returns
- ▶ You collect your profit (sale price minus fees minus cost)

You never touch the product after sending it to Amazon. You never talk to customers. You never deal with shipping logistics. Amazon does all of that for a fee - and that fee is built into your profit calculations before you ever buy a product.

## FBM = Fulfillment by Merchant

FBM stands for **Fulfillment by Merchant**. It's the alternative to FBA - you list on Amazon, but you handle everything yourself:

- ▶ You store the product at home, in a garage, or in your own warehouse
- ▶ When a customer orders, you pick, pack, and ship it yourself
- ▶ You handle returns and customer messages directly
- ▶ You pay shipping costs out of pocket (or build them into the price)

FBM has lower per-unit fees (no FBA pick-and-pack charge), but you lose the Prime badge, Buy Box preference, and the operational leverage Amazon provides. Most beginners start with FBA and only use FBM for testing new products or shipping hazmat items that aren't FBA-eligible.

## FBA vs. FBM - What's the Difference?

|                    | FBA (FULFILLMENT BY AMAZON) | FBM (FULFILLMENT BY MERCHANT)      |
|--------------------|-----------------------------|------------------------------------|
| Who ships?         | Amazon ships to customer    | You ship to customer               |
| Prime badge?       | Yes - Prime eligible        | No (unless Seller Fulfilled Prime) |
| Buy Box advantage? | Strong preference           | Disadvantaged                      |
| Storage            | Amazon warehouse            | Your home/garage/storage           |
| Returns            | Amazon handles              | You handle                         |
| Best for           | Scaling, passive income     | Testing products, hazmat items     |

### KEY TAKEAWAY

FBA wins the Buy Box more often, gets the Prime badge (which most shoppers filter for), and removes 90% of the operational work. This course focuses on FBA.

## The Buy Box - Why It Matters

On Amazon, multiple sellers can list the **same product** on the **same page**. But only ONE seller gets the "Add to Cart" button at any given time. That's the **Buy Box**.

Over **82% of Amazon sales** go through the Buy Box. If you don't have it, you're essentially invisible. The Buy Box rotates between eligible sellers based on price, fulfillment method, seller metrics, and stock levels.

### HOW THE BUY BOX WORKS

#### Product Listing Page

Wireless Bluetooth Headphones

**\$34.99**

Add to Cart

Ships from and sold by: SellerA  
14 other sellers from \$33.50

#### Sellers Competing for Buy Box

SellerA - \$34.99 FBA

WIN

SellerB - \$35.20 FBA

SellerC - \$33.50 FBM

SellerD - \$36.00 FBA

Buy Box rotates among competitive FBA sellers

## Why This Business Works

Price differences exist everywhere. A product might sell for \$15 on Target.com but \$32 on Amazon. After Amazon's fees (~\$8) and prep (~\$2), you profit \$7 per unit. Multiply that by 20 units and you've made \$140 from one product - without ever touching it, shipping it, or talking to a customer.

This isn't a loophole or a hack. It's basic economics: different marketplaces have different prices, and millions of products have these gaps. Your job is to find them.

# Ways to Sell on Amazon

The different business models - pick the one that fits your budget and goals.

---

## The Four Main Models

There are four primary ways people sell on Amazon. Each has different capital requirements, risk levels, and scalability. Understanding all four helps you pick the right path - and avoid the wrong one.

| MODEL                 | STARTUP COST      | TYPICAL ROI   | TIME TO FIRST SALE        | SCALABILITY        |
|-----------------------|-------------------|---------------|---------------------------|--------------------|
| Online Arbitrage (OA) | \$200-\$500       | 30-60%        | 2-3 weeks (FBM: 1-3 days) | High (with tools)  |
| Retail Arbitrage (RA) | \$100-\$300       | 20-40%        | 1-2 weeks (FBM: 1-3 days) | Low (time-limited) |
| Wholesale             | \$2,000-\$5,000+  | 10-18%        | 4-8 weeks                 | High               |
| Private Label         | \$5,000-\$20,000+ | Varies wildly | 3-6 months                | Very High          |

## Online Arbitrage (OA)

Buy discounted products from retail websites (Target, Walmart, brand sites, clearance pages) and resell them on Amazon at a higher price. This is the **lowest barrier to entry** and the **fastest path to profit**. You work from anywhere with a laptop and an internet connection.

### Why OA Works

- ▶ Start with \$200-\$500
- ▶ Work from anywhere
- ▶ 30-60% ROI typical
- ▶ Scalable with automation
- ▶ No supplier relationships needed

### OA Challenges

- ▶ Manual sourcing is time-consuming
- ▶ Deals can go out of stock fast
- ▶ Need to verify product match exactly
- ▶ Some brands restrict resellers

## Retail Arbitrage (RA)

Physically go into stores (Walmart, Target, TJ Maxx, CVS), use a scanning app on your phone to scan barcodes, and find clearance/discount products that sell for more on Amazon. Good for beginners to understand the fundamentals, but it doesn't scale - you're limited by the hours in a day and how far you can drive.

## Wholesale

Buy in bulk directly from brands or authorized distributors at wholesale pricing. Requires higher capital (\$2,000-\$5,000+ per order), supplier relationships, and large minimum order quantities. The margins are **thinner than most people think** - ROI typically peaks around 18%. You need volume to make it work, and building supplier relationships takes months.

### COMMON MISCONCEPTION

Many gurus sell wholesale as "higher margins" - the reality is wholesale ROI maxes out around 18% because you're buying at a set wholesale price everyone else can get too. OA margins are significantly higher because you're finding one-off deals and price discrepancies.

## Private Label

Create your own brand, source manufacturing (usually from China via Alibaba), design packaging, build Amazon listings from scratch, and drive traffic through PPC ads. Highest risk, highest potential reward - but also the most capital-intensive and the longest time to profitability. Most private label products fail.

## Why This Course Focuses on OA

Online Arbitrage is the fastest path to profit with the lowest startup cost. You can start making money in 2-3 weeks with less than \$500. Once you understand the fundamentals, you can scale with automation tools or transition into wholesale/private label later with capital you've already earned.

### THIS COURSE

Everything in this guide is focused on Online Arbitrage (OA). The strategies, tools, and workflows are specifically designed for sourcing products online and selling via FBA.

# Setting Up Your Amazon Seller Account

Step-by-step account setup so you can start listing products.

---

## Individual vs. Professional Plan

|                   | INDIVIDUAL PLAN             | PROFESSIONAL PLAN     |
|-------------------|-----------------------------|-----------------------|
| Monthly cost      | \$0/mo                      | \$39.99/mo            |
| Per-sale fee      | \$0.99 per item sold        | \$0 per item sold     |
| Break-even point  | 40 sales/month              |                       |
| Best for          | Starting out, < 40 sales/mo | Scaling, 40+ sales/mo |
| Buy Box eligible? | Limited                     | Full eligibility      |

### RECOMMENDATION

Start with Individual if you're testing the waters. Switch to Professional once you're consistently selling 40+ units per month - it pays for itself at that point.

## What You Need to Register

- ▶ **Government-issued ID** - driver's license or passport
- ▶ **Bank account** - where Amazon deposits your earnings (every 2 weeks)
- ▶ **Tax information** - SSN (sole proprietor) or EIN (LLC/corporation)
- ▶ **Credit card** - for monthly fees and any charges
- ▶ **Phone number** - for verification

## Seller Central - Your Dashboard

Once registered, you'll spend most of your time in **Seller Central** ([sellercentral.amazon.com](https://sellercentral.amazon.com)). Key sections:

- ▶ **FBA Dashboard** - your hub for everything FBA. Inbound shipments, inventory health, shipping queue, restock recommendations, and FBA-specific reports all in one place.
- ▶ **Inventory** - manage your listings, check stock levels, create shipments
- ▶ **Orders** - see incoming orders, track fulfillment status
- ▶ **Add Products** - create new listings by searching for existing ASINs or building a listing from scratch
- ▶ **Reports** - business reports, inventory health, tax documents
- ▶ **Payments** - view your balance, disbursements, transaction details, and upcoming payouts
- ▶ **Account Health** - your seller metrics, policy compliance, performance targets
- ▶ **Selling Applications** - view and manage category/brand approval requests and gating status

### TIP: CUSTOMIZE YOUR SELLER CENTRAL HOME PAGE

These sections work like a bookmark bar - you can add them directly to your Seller Central home page for quick access. Go to your homepage and click "Add widgets" or drag sections to customize your layout so everything you use daily is one click away.

## What Is a Prep Center?

A prep center is a **third-party warehouse** that receives your products, inspects them, applies FNSKU labels, poly-bags or bundles items, and ships them to Amazon's FBA warehouses for you. They handle all the physical prep work so you **never touch the inventory**.

## When Do You Need a Prep Center?

Once you're scaling past **200-300 units purchased per month**, or if you don't have space at home to store, label, and pack products. Before that, you can prep in your garage or spare room. The tipping point is when prep time is eating into your sourcing time - your time is better spent finding deals than sticking labels.

## Choosing the Right Prep Center

- ▶ **Tax-free states are ideal** - Delaware, Oregon, Montana, New Hampshire. Saves you sales tax on every product you purchase.
- ▶ **East coast advantage** - more FBA fulfillment centers are on the east coast, and the majority of Amazon buyers are there too. This means faster delivery times and lower shipping costs to Amazon warehouses.
- ▶ **Typical pricing** - \$2/unit for singles, \$2.50/unit for bundles, +\$1.50 for oversize/heavy items.

## Supplies You'll Need

Whether you're doing FBA, FBM, or both, you'll need some basic supplies to prep and ship products. Here's the full list:

### Needed for Both FBA and FBM

| SUPPLY                           | WHAT IT'S FOR                                                | TIP                                                              |
|----------------------------------|--------------------------------------------------------------|------------------------------------------------------------------|
| <b>Packing Tape (4" rolls)</b>   | Taping boxes for shipments                                   | Uhaul brand is the best quality                                  |
| <b>Shipping Scale</b>            | Weighing boxes to get accurate shipping weight for labels    | Essential for correct shipping costs                             |
| <b>4×6 Thermal Label Printer</b> | Printing box labels, shipping labels, and SKU barcode labels | Any 4×6 thermal printer works (also prints 2×1 barcodes)         |
| <b>4×6 Thermal Labels</b>        | Label stock for your thermal printer                         | Get them FREE from UPS with a business account, or buy on Amazon |
| <b>Heat Gun</b>                  | Removing store brand barcode labels and stickers             | Heat for a few seconds, peel off cleanly                         |

### Additional Supplies for FBA

| SUPPLY                                    | WHAT IT'S FOR                                                                         | TIP                                                                                       |
|-------------------------------------------|---------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|
| <b>Poly Bags (w/ suffocation warning)</b> | Protecting items, creating multipacks. Package item and put SKU label on bag.         | Get bags with warning labels pre-printed to save a step                                   |
| <b>"Do Not Separate" Stickers</b>         | For multipacks (2pk, 3pk) so Amazon doesn't split your bundle                         | Required on all multi-unit poly bags                                                      |
| <b>Suffocation Stickers</b>               | Safety labels for poly bags or plastic-wrapped items                                  | Not needed if your poly bags already have warnings printed                                |
| <b>2×1 SKU Barcode Labels</b>             | FNSKU labels printed over the product's store barcode so Amazon tracks your inventory | Must cover the original barcode completely                                                |
| <b>Shipping Boxes</b>                     | Ship products to Amazon FBA warehouses                                                | Suggested sizes: 20×15×15 (high qty) or 14×12×6. Get from theboxery.com, ULINE, or Amazon |

### Additional Supplies for FBM

| SUPPLY                | WHAT IT'S FOR                                                       | TIP                                                                                |
|-----------------------|---------------------------------------------------------------------|------------------------------------------------------------------------------------|
| <b>Poly Mailers</b>   | Lightweight bags to ship non-fragile products directly to customers | Cheapest shipping option for soft/flat items                                       |
| <b>Bubble Mailers</b> | Padded envelopes for semi-fragile items                             | Good middle ground between poly mailers and boxes                                  |
| <b>Shipping Boxes</b> | Ship products to customers                                          | Common FBM sizes: 9×6×4, 12×6×6, 14×10×6. Get from theboxery.com, ULINE, or Amazon |

#### WHERE TO BUY SUPPLIES

You can find all of these on Amazon, but also check Quill, ULINE, and The Boxery for bulk pricing. UPS will give you free 4×6 thermal labels if you set up a business account.

## Essential Tools to Install

| TOOL                    | WHAT IT DOES                                                                                                                                                                                         | COST                                                |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------|
| <b>Keepa</b>            | Price history, BSR tracking, sales estimation, offer count over time                                                                                                                                 | ~\$20/mo                                            |
| <b>Seller Amp (SAS)</b> | Chrome extension for quick ROI calculations, profit estimates, and product analysis directly on Amazon pages. Great starting point for beginners learning to evaluate products.                      | ~\$17/mo                                            |
| <b>OakasAmazon</b>      | AI-powered sourcing, Seller Central integration, real fee calculations, automated lead generation. Includes everything SAS does and more - best for sellers active 6+ months who are ready to scale. | See <a href="https://getoakas.com">getoakas.com</a> |
| <b>Coupert</b>          | Auto-applies coupon codes at checkout when sourcing                                                                                                                                                  | Free                                                |

## OakasAmazon Seller Central Integration

Connect your Amazon seller account directly to OakasAmazon. This pulls **real-time data** straight from Amazon's API:

- ▶ **Real-time inventory levels** - know exactly what's in stock at FBA
- ▶ **Order history** - track actual sales velocity per ASIN
- ▶ **Actual FBA fee estimates** - no more guessing from calculators. Real numbers from Amazon's fee API
- ▶ **Account health** - monitor metrics without logging into Seller Central

### WHY THIS MATTERS

Traditional tools like SAS use estimated fees based on product dimensions. OakasAmazon pulls actual fee calculations directly from Amazon's API - the same numbers Seller Central shows you. No more surprises when fees are higher than expected.

# Understanding Amazon Fees

The fees that eat your profit - and how to calculate them before you buy.

## The Fee Stack

Every product sold on Amazon has multiple fees layered on top of each other. You MUST understand and calculate all of them **before you buy a single unit**. Here's the full breakdown:

### FEE WATERFALL - EXAMPLE: \$39.99 PRODUCT, \$15 COST

Sale Price: \$39.99

Referral Fee (15%): -\$6.00

FBA Fee: -\$4.75

Prep: -\$2.00

Product Cost: -\$15.00

**PROFIT: \$12.24 (82% ROI)**

#### Quick Math

Sale: \$39.99

- Fees: \$12.75

- Cost: \$15.00

**= \$12.24 profit**

**ROI: 82%**

$(\$12.24 / \$15.00) \times 100$

## Referral Fee (8-15%)

Amazon's commission for using the platform. Applied as a percentage of the total sale price. Most categories charge **15%**. Some exceptions:

| CATEGORY                                    | REFERRAL FEE |
|---------------------------------------------|--------------|
| Most categories (Home, Toys, Kitchen, etc.) | 15%          |
| Electronics                                 | 8%           |
| Computers                                   | 8%           |
| Video Games & Consoles                      | 8-15%        |
| Clothing & Accessories                      | 17%          |
| Grocery                                     | 8-15%        |

## FBA Fulfillment Fee

What Amazon charges to pick, pack, and ship your product. Based on **size and weight**:

| SIZE TIER      | WEIGHT   | APPROX. FEE   |
|----------------|----------|---------------|
| Small Standard | < 1 lb   | \$3.22        |
| Large Standard | 1-2 lb   | \$4.75-\$5.50 |
| Large Standard | 2-3 lb   | \$5.50-\$6.50 |
| Small Oversize | < 70 lb  | \$9.73+       |
| Large Oversize | < 150 lb | \$89.98+      |

Includes a 3.5% fuel/logistics surcharge baked into the fee.

## Storage Fees

- ▶ **Monthly storage** - \$0.87/cubic foot (Jan-Sep), \$2.40/cubic foot (Oct-Dec, Q4 spike)
- ▶ **Aged inventory surcharge** - products sitting 181-270 days get hit with extra fees. 271-365 days = more. 365+ days = brutal.

### STORAGE WARNING

Don't over-buy. If a product doesn't sell and sits in FBA for 6+ months, storage fees will eat your profit. Buy test quantities first (10-20 units), prove it sells, then restock.

## FBM Costs (If You Ship Yourself)

If you choose Merchant Fulfillment instead of FBA, your costs include:

- ▶ **Shipping** - USPS, UPS, or FedEx rates (varies by weight/size/distance)
- ▶ **Packing materials** - boxes, bubble wrap, tape, labels
- ▶ **Your time** - packing, printing labels, post office runs
- ▶ **Sales tax collection** - in applicable states

FBM margins look higher on paper because there's no FBA fee - but the hidden costs of your time and shipping materials add up fast. Plus you lose the Prime badge and Buy Box advantage.

# Key Metrics Every Seller Must Know

The numbers that determine if a product is worth buying.

## BSR (Best Sellers Rank)

Every product on Amazon has a **Best Sellers Rank** within its category. Lower number = sells more frequently. A product ranked #500 in Home & Kitchen sells significantly more than one ranked #50,000.

### BSR SWEET SPOTS BY CATEGORY

## Monthly Sales Estimate

How many units the listing sells per month. Target: **100+ units/month**. Use Keepa's sales estimator based on BSR drops. Important: if the listing has variations (colors, sizes), the total sales are split across ALL variations - check per-variation, not just the parent.

### ALWAYS CHECK AMAZON'S OWN SALES ESTIMATE FIRST

Amazon now displays an estimated monthly sales figure directly on the listing page, right under the product title. This is the most accurate sales estimate available because it comes from Amazon's own internal data. Always check this number before relying on third-party estimates from Keepa or other tools.

### VARIATION TRAP

Sales are NOT split evenly across variations. It's common for one variation to get the majority of sales while others get significantly less or close to none. Don't assume equal distribution. Always double check each individual variation using Keepa data to see which ones are actually selling. OakasAmazon checks this automatically and factors per-variation sales into every product score.

## ROI (Return on Investment)

$$\text{ROI} = (\text{Profit} / \text{Cost}) \times 100$$

If you spend \$10 on a product and make \$4 profit after all fees, your ROI is 40%. Target: **30%+**. Minimum acceptable: **20%**. Below 20%, one return wipes your gains.

**< 20%**

SKIP - TOO RISKY

**20-30%**

ACCEPTABLE

**30%+**

TARGET - BUY

## Profit Per Unit

The dollar amount you pocket per sale after ALL fees and costs. Target: **\$5+**. Minimum: **\$3**. Why does this matter separately from ROI?

- ▶ A \$1.50 profit with 100% ROI means one customer return (-\$5 processing fee) wipes out 3+ sales of profit
- ▶ Low profit products need extremely high volume to be worth the effort
- ▶ \$5+ profit gives you buffer for returns, price drops, and unexpected fees

## Offer Count (Number of Sellers)

How many sellers are currently listing the same product. This directly impacts how often you win the Buy Box.

### OFFER COUNT SWEET SPOT

1-2

Risky (PL)

3 - 15 sellers

SWEET SPOT

15-30

Competitive

30+

Too Crowded

## Max Cost

The maximum you can pay for a product and still hit your profit/ROI targets. Calculate this BEFORE you source:

$$\text{Max Cost} = \text{Sale Price} - \text{Referral Fee} - \text{FBA Fee} - \text{Prep Fee} - \text{Min Profit Target}$$

If you can't find the product below your Max Cost, move on immediately. Don't force deals.

# Reading Keepa Charts Like a Pro

The single most important skill in OA - understanding price history and market signals.

## What Is Keepa?

Keepa is a browser extension and data service that tracks **every Amazon product's** price, BSR, offer count, and Buy Box history over time. It displays this data as interactive charts directly on the Amazon product page. Learning to read these charts is the #1 skill that separates profitable sellers from money losers.

## The 5 Lines That Matter

| LINE             | COLOR  | WHAT IT TELLS YOU                               |
|------------------|--------|-------------------------------------------------|
| Buy Box Price    | Pink   | Current winning price - what customers pay      |
| Amazon Price     | Orange | When Amazon sells it directly (hard to compete) |
| FBM Price        | Blue   | Lowest FBM (merchant-fulfilled) seller price    |
| BSR (Sales Rank) | Green  | Sales velocity - lower = faster selling         |
| Offer Count      | Purple | Number of sellers on the listing                |

## Bullish Signals (BUY)

These patterns indicate a product is **gaining momentum** - supply thinning, demand stable or rising:

**What this means:** Sellers are running out of stock or leaving the listing. Supply is thinning. Price is rising because fewer sellers are competing. BSR is improving because demand remains steady. This is the ideal time to enter - less competition, higher prices, active demand.

## Bearish Signals (AVOID)

### BEARISH PATTERN: OFFERS RISING + PRICE DROPPING

#### BEARISH SIGNALS:

- Price trending DOWN
- Sellers flooding IN (offers UP)
- BSR worsening (going UP)

● Buy Box Price

● Offer Count

● BSR

**What this means:** Too many sellers are piling onto this listing. They're undercutting each other in a race to the bottom. The Buy Box price is cratering. Even if it looks profitable NOW, by the time your inventory arrives at FBA (2-3 weeks), the price could be \$5-10 lower. Hard skip.

## Reading Keepa Charts Like a Pro (continued)

### Stale Signals (SKIP)

**What this means:** Nothing is happening on this listing. The Buy Box hasn't rotated. No sellers are entering or leaving. The price isn't moving because there's no demand pressure. This is a dead listing with no liquidity - your inventory will sit there collecting storage fees. Walk away.

## Buy Box Rotation - The Seller Turnover Test

Buy Box rotation refers to the **turnover rate of different sellers cycling in and out of the Buy Box** over time. A healthy listing shows sellers rotating through the Buy Box every few minutes to hours.

### Healthy Rotation

- ▶ Multiple sellers winning BB daily
- ▶ No single seller dominates for days
- ▶ Price stays within tight range
- ▶ Indicates active demand
- ▶ Your turn will come quickly

### Slow/No Rotation

- ▶ Same seller holds BB for days/weeks
- ▶ Other sellers never get a turn
- ▶ Low demand, low velocity
- ▶ You'll wait weeks for sales
- ▶ SKIP this listing

You can see this data in Keepa's Buy Box statistics table:

#### KEEPA BUY BOX STATS - WHAT HEALTHY ROTATION LOOKS LIKE

| % WON | AVG. PRICE | STOCK | SELLER NAME          | FBA | LAST WON    | LAST WON     |
|-------|------------|-------|----------------------|-----|-------------|--------------|
| 54%   | \$66.67    | 1     | 2Nspire              | Y   | 05/06 10:04 | 5 hours ago  |
| 16%   | \$64.45    | 1     | MAREESAL LLC         | -   | 05/06 03:00 | 12 hours ago |
| 12%   | \$69.02    | 63+   | Colden Solutions     | Y   | 05/06 14:08 | 1 hour ago   |
| 7%    | \$67.99    | ?     | Kira & Kaja Ventures | Y   | 04/09 20:28 | 26 days ago  |
| 4%    | \$68.99    | 4     | Solid Choice Hub     | Y   | 05/01 14:00 | 5 days ago   |

Buy Box Eligible Offer Counts: New FBA: 7 New FBM: 4 | Range: 90 days | 9 sellers total (showing top 5)

**What to look for:** The **% Won** column shows how often each seller wins the Buy Box. The **Last Won** column shows when they last held it. On a healthy listing, multiple sellers win recently (hours ago, not weeks). If one seller holds 70%+ and others haven't won in weeks, the Buy Box isn't rotating - skip it.

## Price Stability Check

Compare the current Buy Box price to the **90-day average**:

- ▶ **Current price WAY above average** - temporary spike. Might crash back to normal. Risky to source at this price point.
- ▶ **Current price at or near average** - stable. Safe to calculate profit at this level.
- ▶ **Current price below average** - might be a buying opportunity if demand hasn't dried up. Check BSR to confirm sales are still happening.

## Seasonal Patterns

Some products have massive seasonal swings. Set Keepa to **12-month view** to identify patterns:

- ▶ **Q4 spike products** - toys, games, gift items surge Oct-Dec. Buying in Q4 at peak price = paying too much. Source in Aug-Sep at low prices, sell in Nov-Dec at high.
- ▶ **Summer products** - outdoor, pool, camping gear. Dead in winter.
- ▶ **Back to school** - supplies, backpacks, dorm items spike Jul-Aug.

### PRO TIP

Sharp same-day stock drops are NOT real sales - they're inventory adjustments or seller removals. Focus on gradual, consistent stock history drops over days and weeks to gauge real demand. In Keepa's product viewer, check the Stock History column - it shows actual inventory level changes over time. A steady decline in stock = real sales happening.

# How to Source Products (The OA Workflow)

The actual process of finding profitable products to sell - from seed to lead sheet.

## The Sourcing Workflow

## Method 1: Storefront Stalking

Find a seller on Amazon who sells similar products to what you want to sell. Click their storefront name and browse their entire catalog. If they're making money selling those products, you might be able to source the same ones cheaper.

- ▶ **Who to stalk:** Sellers with 5-30 reviews. They're buying retail like you - manageable catalog, findable sources.
- ▶ **Skip:** 0-1 reviews (test/fake accounts) and 50+ reviews (big distributors with large catalogs you can't compete with).
- ▶ **How:** Click the seller name under "Sold by" on any listing → "Visit Store" → browse all products.

## Method 2: Reverse Sourcing

Start with a product you already know sells well (your "seed ASIN"). Look at all the sellers on that listing. Then stalk each seller's storefront for other products you can source.

## Method 3: Brand Sourcing

Find one profitable product from a brand, then check the brand's full Amazon catalog AND their own website. Many brands have direct-to-consumer sites with sales, clearance, and promo codes that create arbitrage opportunities across their entire product line.

## Method 4: Leaf Sourcing

Use Amazon's "Frequently Bought Together" and "Compare Similar Items" sections to discover related products in the same niche. If one product from a brand is profitable, similar products from the same brand often are too.

## Method 5: Manual Website Sourcing

Go directly to brand websites and big retailer sites. Sort by price low-to-high, check sales/clearance pages, and test promo codes. This is where you find deals that other sellers using automated tools miss.

## Seller Selection Guide

## The Source Verification Process

Once you've identified a potential product from a seller's storefront, here's how to verify it's a viable lead:

### 1. Google the Full Title

Copy the COMPLETE Amazon listing title (includes brand, product name, variant, pack count, flavor - everything). Paste it into Google. This finds the exact product on retailer sites where you can buy it cheaper.

### 2. The 10-Minute Rule

**Don't spend more than 10 minutes per product.** If you can't find a viable source within 10 minutes of searching, move on to the next lead. Speed matters more than perfection. There are millions of products - don't get stuck on one.

### 3. Cart Test with 10 Units

Once you find a source, add 10 units to cart and check:

- ▶ Are there quantity limits? (Some sites cap at 2-3 per customer)
- ▶ What's the shipping cost? Does it kill your margin?
- ▶ Is there a free shipping threshold you can hit?
- ▶ Is it actually in stock?

### 4. Apply Coupons

ALWAYS run Coupert/Honey before calculating final cost. Also **manually search** for codes:

- ▶ Google "[brand name] coupon code"
- ▶ Google "[store name] promo code"
- ▶ Check RetailMeNot, Coupons.com, brand social media
- ▶ Some codes save 10-20% that turn a marginal lead into a great one

### 5. Product Matching - Critical

The product MUST be an **exact match**: same brand, size, color, pack count, flavor, model number. Getting this wrong gets your account flagged or suspended.

#### PRODUCT MATCHING MATTERS

Two similar products from the same brand (e.g., 12-pack of 12oz vs. 24-pack of 3.5oz) are NOT the same listing. Sending the wrong product = inauthentic complaint = account suspension risk.

# What to Avoid - Categories, Brands & Red Flags

The stuff that will get your account suspended, your money lost, or your time wasted.

## Forbidden Categories

These categories have high return rates, IP complaint risks, or regulatory issues that make them not worth the hassle for OA sellers:

| CATEGORY               | WHY TO AVOID                                                                        |
|------------------------|-------------------------------------------------------------------------------------|
| Beauty / Personal Care | Heavy IP enforcement, expiration dates, authenticity complaints                     |
| Supplements / Vitamins | FDA regulated, expiry issues, brands aggressively file complaints                   |
| Glass Products         | Break during shipping - high damage rate, returns eat all profit                    |
| Sized Clothing         | 30-40% return rate on clothing. Customers order multiple sizes and return the rest. |

### NO EXCEPTIONS

It doesn't matter how good the ROI looks. These categories will lose you money or get your account suspended. Hard skip every time.

## IP Complaint Brands

Some brands actively file intellectual property complaints against third-party sellers. One complaint = account warning. Multiple = suspension. Before sourcing any new brand, check:

- ▶ **IP Alert lists** - community-maintained lists of brands that file complaints (check seller Facebook groups, forums)
- ▶ **Brand website restrictions** - some brands explicitly state "authorized retailers only"
- ▶ **Test small** - if unsure about a brand, buy 3-5 units first. Don't invest \$500 into an untested brand.

## Wholesaler/Distributor Traps

Sellers with "wholesale," "supply co," "distributor," or "trading" in their name have wholesale pricing you can't compete with. They buy at 40-60% off MSRP directly from brands. Your retail-sourced price can't beat theirs. Hard skip.

## Products Under \$25

You CAN make money selling items under \$25, but the math gets brutal:

### WHY UNDER \$25 IS PAINFUL - FEE BREAKDOWN EXAMPLE

#### \$22 Product Example

Sale Price: \$22.00  
- Referral (15%): \$3.30  
- FBA Fee: \$3.50  
- Prep: \$2.00  
- Cost (est.): \$11.50

**Profit: \$1.70 | ROI: 15%**

#### \$38 Product Example

Sale Price: \$38.00  
- Referral (15%): \$5.70  
- FBA Fee: \$4.50  
- Prep: \$2.00  
- Cost (est.): \$18.00

**Profit: \$7.80 | ROI: 43%**

Average profit on sub-\$25 items is about **\$1.50 per unit**. One return (\$5 processing) wipes out 3 sales of profit. Focus on \$25+ products where the math actually works.

## Amazon-Dominated Listings

If Amazon themselves are selling the product and winning the Buy Box 60%+ of the time, they control the price and you'll barely get sales. Check the Keepa Buy Box history - if the orange line (Amazon's price) is dominant, skip it.

## Hazmat Products - The Hidden Opportunity

Hazmat (dangerous goods) products require special FBA approval. Most sellers can't or don't bother. This creates **lower competition and higher margins** for approved sellers.

### PRO TIP: HOW TO GET HAZMAT APPROVED

**Step 1:** Start by selling hazmat products FBM (you ship them yourself). No approval needed for FBM hazmat.

**Step 2:** Build a track record selling hazmat FBM over time.

**Step 3:** Amazon may invite you to their **Dangerous Goods program**, which allows you to send hazmat inventory to FBA.

**Result:** FBA hazmat = significantly less competition than regular products. Most sellers don't know this path exists.

# Competition Analysis - Who Are You Really Competing With?

Total sellers on a listing does not equal actual competition.

## Buy Box Competitors vs. Total Sellers

A listing might show "20 sellers" but that doesn't mean you're competing with 20 people. You only compete with sellers **priced at or near the current Buy Box price**. Ignore sellers priced \$10+ above the Buy Box - they're never getting sales.

### REAL COMPETITION EXAMPLE - "15 SELLERS" LISTING

Buy Box Price: \$34.99

|             |             |             |                                         |                      |
|-------------|-------------|-------------|-----------------------------------------|----------------------|
| \$34.99 FBA | \$35.20 FBA | \$35.50 FBA | \$36.00 FBM                             | ← 4 REAL competitors |
| \$39.99 FBA | \$42.00 FBM | \$44.99 FBM | ... + 8 more above \$40 ← 11 irrelevant |                      |

**Real competition: 4 sellers, NOT 15**

## The Sales Split Formula

**Your Est. Monthly Sales** = Monthly Sales / (**Real BB Competitors** + 2 buffer)

**Example:** Product sells 200 units/month. 4 real Buy Box competitors + you + 2 buffer = 7 total. Your share: 200 / 7 = ~28 units/month. At \$7 profit per unit, that's \$196/month from one product.

You need at least **12-15 sales/month per SKU** to be worth the effort and the storage fees.

## FBA vs. FBM Breakdown

FBA sellers win the Buy Box significantly more often than FBM sellers (all else being equal). When analyzing competition:

- ▶ **Mostly FBA competitors** - you're on equal footing. Pure price + metrics competition.
- ▶ **Mostly FBM competitors** - you have an advantage as FBA. The Prime badge gives you Buy Box preference even at slightly higher prices.
- ▶ **FBM shipping template advantage** - if you optimize your FBM shipping template based on your location, you can win the Buy Box over other FBM sellers when you're closer to the customer's location. Amazon factors delivery speed into Buy Box decisions, so proximity matters.
- ▶ **Amazon is on the listing** - Amazon dominates. You need to price lower or wait for them to run out of stock.

## High Velocity Exception

Don't automatically reject high-seller-count products. A product selling **1,000+ units/month** can support 30-50 sellers and still be profitable for each one. Do the math:

| MONTHLY SALES | SELLERS    | YOUR SHARE | @ \$5 PROFIT | VERDICT  |
|---------------|------------|------------|--------------|----------|
| 200/mo        | 25 sellers | ~7/mo      | \$35         | Skip     |
| 500/mo        | 25 sellers | ~18/mo     | \$90         | Marginal |
| 1,200/mo      | 25 sellers | ~44/mo     | \$220        | Buy      |

## Offer Count Trends

The **direction** of seller count matters more than the current number:

- ▶ **Rising offers** = more sellers piling in. Bearish signal. Competition is about to get worse.
- ▶ **Declining offers** = sellers leaving or running out of stock. Bullish signal. Less competition for you.
- ▶ **Stable offers** = equilibrium. Neutral. Check other signals.

# Your First 30 Days - Action Plan

What to do in your first month to go from zero to your first sale.

## Week-by-Week Breakdown

### Week 1: Setup

- ▶ Create your Amazon seller account (Individual plan to start)
- ▶ Install Keepa browser extension + subscribe (\$20/mo)
- ▶ Set up OakasAmazon (connect Discord, connect Seller Central)
- ▶ Install Coupert for auto-coupon testing
- ▶ Choose a prep center (if scaling beyond home prep)
- ▶ Learn Keepa chart basics - spend 30 min/day reading charts on random products

### Week 2: Practice Sourcing

- ▶ Pick 3 seed ASINs from products you personally use/know
- ▶ Stalk 5-10 sellers on those listings (5-30 review sellers)
- ▶ Run through the full sourcing workflow on their storefronts
- ▶ **Don't buy yet** - just practice identifying potential leads
- ▶ Verify Keepa signals, calculate profit, check IP risk
- ▶ Build a spreadsheet of leads (ASIN, source URL, cost, sale price, profit, ROI)

#### TEST YOUR LEADS WITH OAKASAMAZON

Use the **/score** command in OakasAmazon to get a full breakdown of any product. It scores the lead out of 10 and explains the reasoning - profitability, competition, sales velocity, Keepa trend signals, Buy Box health, and whether you should buy, review, or skip. It's the fastest way to learn what makes a good lead.

### Week 3: First Purchase

- ▶ Find 3-5 products that meet ALL criteria: 30%+ ROI, \$5+ profit, 100+ sales/mo, good Keepa chart
- ▶ **Buy 10 units of each** as a test batch - don't over-invest on untested products
- ▶ Ship to your prep center (or prep at home: label, poly-bag, box)
- ▶ Create FBA shipment in Seller Central
- ▶ Send to Amazon warehouse

### Week 4: List and Learn

- ▶ Once FBA receives your inventory (2-5 days), it goes live automatically
- ▶ Monitor your listings daily: BSR movement, Buy Box rotation, pricing
- ▶ If you're not getting the Buy Box, check your price vs. competitors
- ▶ Track actual sales velocity vs. your estimate
- ▶ Adjust pricing if needed (don't panic-drop on day 1, give it 3-5 days)

Starter Budget Breakdown

| ITEM                    | COST        | NOTES                             |
|-------------------------|-------------|-----------------------------------|
| Seller Account          | \$0/mo      | Individual plan until 40 sales/mo |
| Keepa Subscription      | \$20/mo     | Essential - non-negotiable        |
| First Inventory         | \$200-\$500 | 10 units x 3-5 products           |
| Prep (if home prepping) | \$20-\$30   | Labels, poly bags, tape           |
| Total to Start          | \$240-\$550 |                                   |

The Compound Growth Engine

Reinvest 70-80% of profits back into inventory. This creates compound growth:

## Repricing - The Key to Consistent Sales

Once your inventory is live, repricing is the single most important habit for maintaining Buy Box presence and driving consistent sales. Most new sellers list a product, set a price, and forget about it. That's how inventory sits for weeks collecting storage fees.

### Why Repricing Matters

- ▶ **The Buy Box is price-sensitive** - Amazon's algorithm constantly evaluates which seller gets the Buy Box. Your price relative to other sellers is a major factor. If you're not actively managing your price, you're giving the Buy Box away.
- ▶ **Repricing increases Buy Box presence** - by strategically adjusting your price, you can increase the percentage of time you hold the Buy Box, which directly translates to more sales.
- ▶ **Stale prices lose sales** - if competitors reprice and you don't, you'll slowly drop out of Buy Box rotation. Repricing keeps you competitive and visible.

### How to Reprice Effectively

- ▶ **Reprice every 2 days across all listings** - set a routine. Every 2 days, review all your active listings and adjust prices based on current competition. This keeps you in the Buy Box rotation consistently.
- ▶ **Force sales by lowering within 2%** - if you want to push sales on a listing, drop your price within 2% of the current Buy Box price. This small adjustment can trigger Amazon's algorithm to rotate you into the Buy Box more frequently without destroying your margins.
- ▶ **You can manipulate the Buy Box** - while you're active on a listing's Buy Box, changing your price even slightly signals to Amazon's algorithm that you're an active, competitive seller. This can bump your Buy Box share compared to sellers who set and forget. You can also price 2% ABOVE the current Buy Box price and still get sales - Amazon keeps you in Buy Box eligibility within that range. So you can manipulate in both directions: lower to force more rotation to you, or raise to protect margins while still getting your share of sales.

#### **DO NOT PENNY-DROP**

Never keep lowering your price by a few cents at a time. This starts a race to the bottom - every other seller will match you cent by cent, and the product price tanks for everyone. You'll destroy the listing's profitability and end up selling at a loss. If you need to be competitive, make one strategic price adjustment within 2% and hold it. Don't chase pennies.

**Repricing Strategy Summary**

| ACTION                       | WHEN                              | HOW                                                                              |
|------------------------------|-----------------------------------|----------------------------------------------------------------------------------|
| <b>Routine reprice</b>       | Every 2 days                      | Review all listings, adjust to stay within competitive range of Buy Box price    |
| <b>Force sales</b>           | Slow-moving inventory             | Lower price within 2% of current Buy Box - triggers more Buy Box rotation to you |
| <b>Price up</b>              | Low competition / sellers leaving | If offers are declining, raise your price gradually to capture higher margins    |
| <b>Match, don't undercut</b> | Stable listings                   | Match the Buy Box price exactly. Don't start a penny war.                        |

**THE GOLDEN RULE OF REPRICING**

Repricing is about **staying competitive**, not being the cheapest. A small, strategic price adjustment every 2 days keeps you in the Buy Box rotation without destroying margins. Consistency beats aggression.

**Common First-Month Mistakes**

- ▶ **Buying before calculating ALL fees** - the #1 profit killer
- ▶ **Not cart testing** - quantity limits and shipping costs surprise you
- ▶ **Skipping product matching** - wrong variant = account complaint
- ▶ **Sourcing seasonal products at peak** - buying Q4 products in December at inflated prices
- ▶ **Ignoring IP complaint brands** - one complaint can threaten your account
- ▶ **Over-buying unproven products** - 50 units of something you've never sold = big risk

# Scaling with Automation

How to go from manual sourcing to a system that runs while you sleep.

## The Manual Sourcing Ceiling

Manual sourcing has a hard cap. Even working 4-6 hours/day, you'll find maybe 3-5 qualified leads. That's not enough to scale a real business. At some point you need leverage - either people or technology.

### SCALING OPTIONS COMPARISON

#### Manual

Hours/day: 4-6  
Leads/day: 3-5  
Cost: \$0  
Consistency: Low  
Scalable: No

**Good for learning**

#### VA

Hours/day: 8 (theirs)  
Leads/day: 5-10  
Cost: \$400-1,000/mo  
Consistency: Medium  
Scalable: Somewhat

**Requires training**

#### AI Automation

Hours/day: 24/7  
Leads/day: 20-50+  
Cost: Tool subscription  
Consistency: High  
Scalable: Yes

**Best ROI on time**

## Virtual Assistants (VAs)

Hiring someone to source for you. The reality:

- ▶ **Cost:** \$400-\$500/month base salary. Up to \$1,000/month with incentives and performance bonuses for high-quality leads.
- ▶ **Training:** Takes 2-4 months before they're consistently finding good leads. You have to teach them everything you know.
- ▶ **Quality:** Varies wildly. You still have to review every lead they send. Bad VAs cost you money in wasted purchases.
- ▶ **Management:** You become a manager. Time zones, communication, performance tracking.

## AI-Powered Sourcing

Modern tools can automate the entire sourcing workflow:

- ▶ Scan seller storefronts automatically (hundreds per day)
- ▶ Check all criteria: BSR, ROI, profit, offer count, Keepa trends
- ▶ Verify source availability and pricing
- ▶ Calculate real fees using Amazon's actual API
- ▶ Deliver verified leads to your desired lead sheet
- ▶ Run 24/7 without breaks, salary, or management

## What Good Automation Looks Like

A good automated system delivers leads that are ready to buy with zero guesswork:

### EXAMPLE AUTOMATED LEAD OUTPUT

**OakasAmazon Bot**

Today at 2:47 AM

#### NEW QUALIFIED LEAD

Wireless Noise Cancelling Headphones - Sony WH-1000XM5

ASIN: B0BS1K5P4L | BSR: 1,247 in Electronics

Sale: **\$348.00** | Source: [Target.com](#) \$219.99

Profit: **\$72.45** | ROI: **33%** | Score: **7.8/10**

Monthly Sales: 890 | Sellers: 8 | Trend: **BULLISH**

BB Rotation: Healthy (4 sellers cycling) | Amazon: Not on listing

## When to Automate

Don't automate what you don't understand yet. First:

- ▶ Manually source until you can spot a good lead in **30 seconds**
- ▶ Understand why certain products fail (returns, IP complaints, flat Buy Box)
- ▶ Know your criteria inside and out (you need to know what to tell the tool to look for)
- ▶ Have at least 1-2 months of manual selling experience

Once you can evaluate a lead instantly, automation multiplies your output 10-50x without sacrificing quality.

### READY TO AUTOMATE?

**Oakas automates the entire sourcing workflow** - from storefront stalking to verified leads in your Discord. AI-powered analysis with real Seller Central data, Keepa trend signals, and competition scoring. No VAs. No guesswork.

## Product Criteria - At a Glance

| METRIC           | MINIMUM       | TARGET               | SKIP IF                        |
|------------------|---------------|----------------------|--------------------------------|
| Sale Price       | \$25+         | \$30-\$80            | Under \$25                     |
| BSR              | Category cap  | Under 50K            | Over 150K                      |
| Monthly Sales    | 100+          | 200+                 | Under 50                       |
| Offer Count      | 3+            | 3-15                 | Over 30 (unless high velocity) |
| Profit/Unit      | \$3+          | \$5+                 | Under \$3                      |
| ROI              | 20%+          | 30%+                 | Under 20%                      |
| Keepa Trend      | Neutral       | Bullish              | Bearish or Stale               |
| Buy Box Rotation | Some rotation | Multiple sellers/day | Same seller for days           |

## Formulas

**Profit** = Sale Price - Cost - Referral Fee (15%) - FBA Fee (\$3-5) - Prep (\$2)

**ROI** = (Profit / Cost) x 100%

**Your Monthly Sales** = Total Monthly Sales / (Real BB Competitors + 2)

**Max Cost** = Sale Price - All Fees - Min Profit Target

## Keepa Signal Quick Reference

### BULLISH (Buy)

- ▶ Price trending UP
- ▶ Offers trending DOWN
- ▶ BSR improving (going down)
- ▶ Active Buy Box rotation

### BEARISH (Avoid)

- ▶ Price trending DOWN
- ▶ Offers trending UP
- ▶ BSR worsening (going up)
- ▶ Race to bottom on price

## Hard Skips - Never Source These

- **Categories:** Beauty, Supplements, Glass, Sized Clothing
- **Brands:** Known IP complaint filers (check community lists)
- **Sellers:** Wholesalers, distributors, "supply co" in name
- **Listings:** Amazon-dominated (60%+ BB), stale Buy Box, flat Keepa
- **Products:** Under \$25 (avg \$1.50 profit), expired or near-expiry

## Category BSR Caps

| CATEGORY                | MAX BSR |
|-------------------------|---------|
| Books                   | 30,000  |
| Toys & Games            | 60,000  |
| Electronics             | 80,000  |
| Home & Kitchen          | 100,000 |
| Industrial & Scientific | 150,000 |

## Sourcing Checklist (Per Product)

- BSR within category cap?
- Monthly sales 100+?
- Keepa chart: bullish or neutral?
- Buy Box rotating (not held by one seller)?
- 3-15 real BB competitors?
- Not in forbidden category?
- Not an IP complaint brand?
- Source found (exact product match)?
- ROI 30%+ after ALL fees?
- Profit \$5+ per unit?
- Source in stock, 10+ available?
- Coupon codes tested?
